Nima Mahini

Backend Software Engineer — Golang & Node.js

Turkey (Open to Relocation) | +90 555 898 48 35 | nimamahini81@gmail.com | github.com/nimamleo | linkedin.com/in/nimamahini

Summary

Backend engineer working mainly in Golang and Node.js. Over the past four years I've built and maintained blockchain syncers, a real-time chat system, and payment integrations, along with some work on microservices and distributed systems. I pick up new tools and codebases quickly, and I like being involved from the initial design through to what's actually running in production. Open to relocating for the right team.

Skills

Languages/Frameworks: Golang, Node.js, TypeScript, Nest.js, Gin, Echo

Backend: RabbitMQ, gRPC, WebSocket, Temporal, GraphQL, SSE, Redis Streams, JWT

Architecture: Microservices Architecture, Distributed Systems, Scalability

Database: MySQL, PostgreSQL, Redis, MongoDB, ChromaDB, PostGIS

DevOps/Cloud: Docker, Docker Compose, Traefik, Microsoft Azure, AWS (S3), Kubernetes (basic), CI/CD (GitLab, GitHub), K6, Sentry, Grafana

Testing: Unit, Integration, E2E

Practices: Agile, Scrum, Code Review

Experience

TLR — Software Engineer (Node.js) (UK - Remote) *Jan 2026 – Present*

- Built and maintain the backend of an eLearning platform serving active students and instructors
- Refactored the entire database structure and codebase to improve scalability
- Reduced media load time from 10s to 3s through targeted performance optimization
- Integrated Stripe payment gateway for subscriptions and one-time purchases
- Deployed and manage backend infrastructure on Microsoft Azure

Bit24 — Software Engineer (Golang) *Apr 2025 – Dec 2025*

- Maintained blockchain syncers supporting networks including Polkadot, Near, and Sui
- Built a scalable, distributed coin-watcher system monitoring 700+ coins across major global exchanges
- Built CLI tools to generate wallet addresses, fetch balances, estimate fees, transfer tokens, and track transaction status

Daayar — Software Engineer (Golang, Part-time) (Remote) *Jan 2025 – Apr 2025*

- Improved application performance by optimizing inefficient SQL queries, reducing database load and improving response times by ~30%
- Refactored complex business logic to improve code maintainability and efficiency
- Identified and resolved critical runtime errors, increasing system reliability

G2 Holding — Software Engineer (Node.js) *Sep 2023 – Jan 2025*

- Improved API performance by integrating Redis caching, cutting response times by 40%
- Built a distributed, real-time chat application using Socket.IO, supporting 1,000+ concurrent users
- Implemented full-text search indices in PostgreSQL for chat search functionality
- Developed gRPC services and Redis Streams to improve inter-service communication across a microservices architecture; automated deployment pipelines with CI/CD to streamline releases
- Integrated Apple Payments, Google Payments, and Zarinpal for payment processing

Raychat — Software Engineer (Node.js)*Oct 2022 – Aug 2023*

- Developed RESTful APIs using Node.js, Express, and MongoDB to support company expansion into new markets
- Built a web application integrated with the ChatGPT engine for enhanced functionality
- Collaborated with a senior developer to design an FAQ service using NestJS

Projects

Nearbee — Founder (Part-time, alongside full-time role) (Remote)*Oct 2025 – Present*

- Founded and built Nearbee, a side project focused on business advertising and customer engagement
- Built real-time chat, SMS, and push-notification tools plus analytics dashboards to help businesses run and measure customer campaigns
- Tracked user interaction data to support data-driven product decisions
